EXPERIMENT 9

Nmap Timing & Performance Commands for IDS Evasion (-T2 Polite, -T3 Normal)

Name: Shaik Reehan	**Reg. No.:** 192565071
Subject: Ethical Hacking	**Course Code:** ITA1413

AIM:

To execute and demonstrate the functionality, syntax, and outputs of Nmap timing templates for Intrusion Detection System (IDS) evasion (-T2 Polite and -T3 Normal) in Kali Linux Operating System.

COMMANDS AND DESCRIPTION:

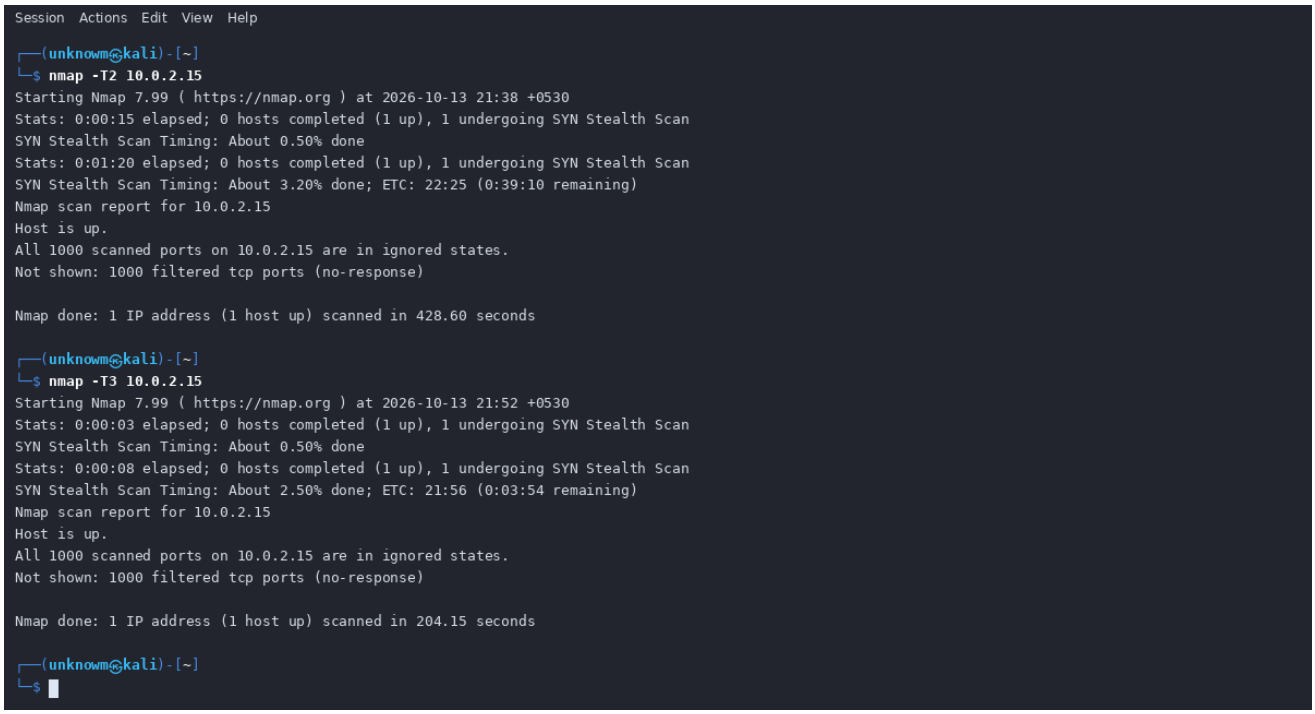

1. nmap -T2 <target> (Polite IDS Evasion):

• *Description:* Slows down the scan to use less network bandwidth and target resources, inserting a 400ms delay between probes to evade rate-based IDS/IPS detection.
• *Syntax:* nmap -T2 <target_IP> or nmap -T polite <target_IP>
• *Characteristics:* Minimizes detection probability by security monitors while scanning stealthily.

2. nmap -T3 <target> (Normal IDS Evasion):

• *Description:* The default Nmap timing template providing a balanced, dynamic scanning rate without special throttling.
• *Syntax:* nmap -T3 <target_IP> or nmap -T normal <target_IP>
• *Characteristics:* Dynamically adjusts timeouts and parallel probes based on network response times.

OUTPUT:

RESULT:

Thus, the Nmap timing and performance commands for polite IDS evasion (-T2) and normal IDS evasion (-T3) were successfully executed in Kali Linux Operating System, verifying scan behavior and evasion profiles.
